## **DETAILED ACTION**

### ***Claims and Claim Objections***

Claims 26-28, 35, 43, 59, 60, and 62-66 are amended. Claims 67-77 are added.

Objections to claims are withdrawn.

Applicant has constructively elected a closed ring type light source element [see claim 41, Applicant's Figure 5, and MPEP 818.02 (all)]. Applicant can and does have more generic claims pending.

### ***Allowable Subject Matter***

Claims 26-28, 31-37, 40-41, 43-44, and 59-77 are allowed.

The following is an examiner's statement of reasons for allowance:

A thorough search of relevant prior art of record did not disclose or render obvious the light source element as claimed comprising the design specific combination of limitations as amended 24 April 2009.

The closest combination is Kalmanash USPAT 5,211,463 in view of Tatsuaki et al (Tatsuaki) European Patent Application EP 0 798 507 A1 and Johnson et al (Johnson) USPAT 6,439,731 B1.

Kalmanash discloses [entire patent, especially Figures 6 and 7] a light source element, comprising: a light waveguide, 86; a light exit face, 88, and at least one light entry face, 100, on the light waveguide; a reflector, 96, contacting the face that is lying opposite the light exit face, and at least some of lateral surfaces [surface facing viewer in Figure 7 and surface behind (away from viewer), as well as the lower vertical portions of the left and right surfaces] connecting the light exit face and the opposite surface being covered with reflectors, 104 on left and right, that at least one of reflect and diffusely return light;

a light source, 102, positioned in front of the light entry face, 100, that is substantially coplanar with the light source element, including the surface opposite the light exit surface wherein light enters at an oblique angle (obvious per Figure 6);

and the light entry face [concave surfaces, 100] being formed by a part of at least one of the lateral surfaces and the opposite surface not provided with a reflector and being arranged at an acute angle [concave curve has a portion that is at an acute angle – please note Applicant has not claimed planar (flat) surfaces] relative to one of principal directions of extent of the light waveguide.

*Fig. 6.*

*Fig. 7.*

Tatsuaki teaches in Figure 12 the use of at least one of the light exit face and the opposite surface of the light waveguide comprise light-scattering sections and plane sections, and an area ratio of the plane sections to the light-scattering sections along the light waveguide is set such that a uniform luminance of the light source element is achieved to provide improved performance directional light diffusing film [Introduction (57)].

Kalmanash teaches the advantage of using reflectors that cover at least some of lateral surfaces connecting the light exit face and the opposite surface to improve efficiency [col. 5, lines 7-16, reflective coating 38].

Johnson teaches the advantages of using semiconductor light-emitting diode light sources, 12, [Abstract, Background, and col. 5, line 1 through col. 6, line 65] to improve reliability and efficiency (applicable to any configuration).

***Fig. 2***

However, no prior art was found to render the particular combination of design specific limitations *prima facie* obvious to one of ordinary skill.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
